

Lab Sheet - 10

Objective(s):

- To understand data files and file handling in C.

Problems:

1. Write a program to create a file and store records of 10 students (name, roll, marks). Then read and display all the records from the file.
2. Write a program to open an existing text file and count the total number of characters, words, and lines in the file.
3. Write a program to copy the contents of one file to another file.
4. Write a program to create a structure employee with fields: id, name, address, and salary. Write multiple employee records into a file and display all the records by reading from the file.
5. Write a program to demonstrate the use of file positioning functions fseek(), ftell(), and rewind().
